

DexHand reorientation cube -- 2x2 tag36h11 tiles, 50 mm edge, print on A4 at 100 %

MEASURE ME: exactly 100 mm

If that bar is not 100 mm the print was SCALED: the tile black square is then not 20 mm, and every recovered distance is wrong by the same ratio. Sheet A4. Net 150 x 200 mm (the solid black outline). Cube edge 50 mm. Tile black square 20 mm (25 mm label, 10 modules). CUT on the solid black outline, CREASE on the black dashed lines. Creases fall on the tiles' white quiet zones; a fold through a black module breaks that tile entirely. RIGHT +X is the cube's OWN right: facing the FRONT face, it is on your LEFT. Wrap printed side OUT -- a mirrored tag decodes as nothing.
