

DexHand reorientation cube -- 2x2 tag36h11 tiles, 70 mm edge, print on A3 at 100 %

MEASURE ME: exactly 100 mm

If that bar is not 100 mm the print was SCALED: the tile black square is then not 28 mm, and every recovered distance is wrong by the same ratio.  
Sheet A3. Net 210 x 280 mm (the solid black outline). Cube edge 70 mm. Tile black square 28 mm (35 mm label, 10 modules).  
CUT AWAY the solid black outline -- it is drawn OUTSIDE the net, so its INNER edge is the true size; cutting outside it leaves every face 0.8 mm oversized. CREASE on the black dashed lines: they fall on the tiles' white quiet zones, and a fold through a black module breaks that tile entirely.  
RIGHT +X is the cube's OWN right: facing the FRONT face, it is on your LEFT. Wrap printed side OUT -- a mirrored tag decodes as nothing.
