

DexHand reorientation cube -- 3x3 tag36h11 tiles, 60 mm edge

Tile black square 16 mm (20 mm label, 10 modules). Print at 100 % -- any scaling biases every recovered distance by the same ratio.
Crease on the dashed lines. Creases fall on the tiles' white quiet zones; a fold through a black module breaks that tile entirely.
RIGHT +X is the cube's OWN right: facing the FRONT face, it is on your LEFT. Wrap printed side OUT -- a mirrored tag decodes as nothing.
